This is a general outline of vaccines that I recommend. Each herd is different and you should consult with your veterinarian about a program that will work in your herd.

**Sows**

1. **Flusure XP/Respisure One** Whole herd every 6 months

2. **Fostera PRRS** Whole herd every 6 months

*Fostera PRRS is safe to give to Bred Sows from day 45 of gestation to one week pre farrowing.*

3. **Farrowsure B Gold** One dose at or right before weaning

4. **Prosystem RCE Scour vaccine or Littergaurd LTC** 2 weeks pre farrowing unless they have never had this vaccine then it should be given 4 and 2 weeks pre farrowing.

5. **Dectomax Injectable** 5 days prior to farrowing

**Gilts Pre Breeding**

1. **Flusure XP/Respisure One** Two doses two weeks apart
2. **Farrowsure B Gold** Two doses two weeks apart
3. **Fostera PRRS** One dose
4. **Dectomax**
Gilts Pre Farrowing

1. Prosystem RCE or Littergaurd LTC Two doses 4 and 2 weeks prefarrowing
2. Dectomax Injectable 5 days prior to farrowing

Pigs at Processing

1. Iron Injection
2. Respisure One 2cc dose
3. Draxxin 0.1cc (25mg/ml)
4. Exceed 0.2cc

Pigs at Weaning

1. Fostera PCV HM Repeat in 2 to 3 weeks
2. Flusure XP/ER Bac Plus Repeat in 2 to 3 weeks
3. Fostera PRRS One dose
4. Draxxin 0.2cc (25mg/ml)
5. Dectomax

If your herd has specific disease conditions that exist then there are medications/vaccines that can be used to treat these. If there is a problem in your herd the best action to take is to call a veterinarian and have testing performed to find out what the disease is and what medication and or vaccine can be used to treat the problem.
